## *Terminal Services*

### **Work away from the Main Office**

The traditional way to work from a remote location was using PC Anywhere. This is slow and cumbersome. This also does not offer remote connection for multiple users.

### **Terminal Services**

This is a utility within Windows Server, which allows multiple users concurrent access to the network resources from multiple remote locations.

### **Terminal Server**

A "Terminal Server" PC is placed on your network. It functions as a host to all remote users. The speed is excellent and the user interface that is presented to the remote user the same Windows Interface, as in the office.

### **Simple to use**

The remote user clicks an icon on their desktop and they immediately establish a remote session via the Internet. A firewall manages the authentication and encryption for remote users.

### **Familiar Windows Interface**

The user interface is Windows; there is little or no training. Applications appear as they do when in the office.

*Please call MicroAge to provide you with a demonstration of sites across Canada with Terminal Servers installed.*

*Connect to your office! From home, a remote office, the sales staff on the road, or even when you are on vacation.*
