Virus Protection

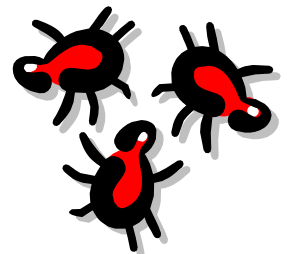

In a Business Environment, we recommend:

Symantec AntiVirus Corporate Edition for your File Server PC. This is available for only \$39. With this, you must acquire a license for each user plus the server for only \$69 each (minimum qty 10). Installation & setup is at \$97/hr.

MicroAge will install the software on your server and instruct the server to regularly and automatically get your updates—and then “push” the new virus protection software to each PC on the network. In this fashion, you are always up to date and protected. And the best part is that your users no longer need to remember to download and manage your virus protection.

We ask all of our clients to please consider appropriate Anti-Virus protection. If you have Anti-Virus software, please make sure that you have renewed your subscription and are updating your systems on a regular basis.

Please call Rick or Rob at 352-2112 for more information on Anti-Virus protection for your office.
